About

2+ years of experience in full-stack web development modernizing enterprise applications for Korn Ferry. Skilled in React, TypeScript, Tailwind CSS, Redux, Zustand, Node.js, NestJS, PostgreSQL, and event-driven systems using RabbitMQ and Kafka. Strong focus on building scalable, high-performance solutions with clean and maintainable architecture.

Skills

Languages & Frameworks: C++, Python, JavaScript, TypeScript, React, Tailwind CSS, Node.js, NestJS, JWT

Databases & Tools: MySQL, PostgreSQL, RabbitMQ, Kafka, Redux, Zustand, GitHub, Postman

Experience

Associate Software Engineer, iSpace (Client: Korn Ferry)

Dec'24 – Present

Legacy Application Support and Stabilization

- Accomplished a **25%+** reduction in production issues by implementing structured bug triaging and root-cause fixes across dev, QA, staging, and production environments, which led to improved system stability and reliability.
- Accomplished faster issue resolution by implementing environment-wise debugging and regression fixes, which led to smoother releases and fewer recurring defects.

MVP Feature Development and Modern UI

- Accomplished a **30%+** improvement in application performance and user experience by implementing **15+** React and TypeScript pages from Figma designs with optimized component architecture, which led to faster load times and cleaner UI workflows.
- Accomplished scalable frontend workflows by implementing Redux and Zustand for state management, which led to a **25%+** reduction in UI inconsistencies and data handling bugs.

Backend Services and Event-Driven Architecture

- Accomplished a **30%+** increase in API reliability by implementing modular backend services using Node.js, NestJS, and PostgreSQL, which led to more stable enterprise workflows.
- Accomplished a **35%+** improvement in system resilience by implementing asynchronous communication using RabbitMQ and Kafka, which led to efficient real-time data processing and fewer service failures.

Continuous Delivery and Workflow Complexity

- Accomplished faster MVP rollouts by implementing new features and resolving cross-environment defects in each release cycle, which led to smoother transitions as business workflows became more complex.

Project Intern, Associate Software Engineer, iSpace (Client: Korn Ferry)

June'24 – Dec'24

AI-Based Resume Ranking & Job Description Matching Tool (Internal Hiring Tool)

- Accomplished faster candidate shortlisting by implementing an AI-driven resume ranking system that analyzed job descriptions and matched candidate skills and relevance, which led to **significant reduction in manual screening time**.
- Accomplished improved hiring accuracy by implementing automated skill extraction and relevance scoring, which led to **stronger alignment between candidate profiles and role requirements**.

Cafeteria Application (Team Ordering & Management System)

- Accomplished streamlined daily ordering workflows by implementing a real-time web-based ordering and consolidation system, which led to **faster processing and smoother team coordination**.
- Accomplished reduced order errors by implementing automated price calculation and centralized order tracking, which led to **improved efficiency and user satisfaction**.

Achievements

- Secured **1st place in company-wide hackathon** by developing a high-impact internal solution recognized for innovation and execution.
- Became **billable during internship based on performance**, demonstrating early ownership and contribution to production-level work.
- Received a **recognition award among junior developers** for consistent high-quality delivery and problem-solving.

Education

Gyan Ganga Institute of Technology and Sciences, B.Tech in Computer Science (CGPA: 8.45)

Aug'20-Jun'24
